NOTICES TO CORRESPONDENTS.

THE MINING JOURNAL Blattway and Commercial Gajette.

LONDON, NOVEMBER 16, 1844.

The continued and frequent reports of accidents attendant on the working of collieries would appear in the estimation of some indi-viduals to be insufficient in themselves to awaken public sympathy, and hence the proceedings in the Bail Court (ex parte BLUNDELL) on the 12th inst., the details of which will be found inserted in an-

viduals to be insufficient in themselves to awaken public sympathy, and hence the proceedings in the Bail Court (see parts Bluymath), on the 17th inst., the details of which will be found inserted in another column. The course taken by Mr. Bluymath is one which deserves our thanks—for it enables us to place hefere our residers the humane feelings by which he is prumpted, and also the state of the law in the case of deedands; while we treat that some marked expression on the part of his neighbours will afford him convincing expression on the part of his neighbours will afford him convincing expression on the part of his neighbours will afford him convincing the convenient of the law in the case to which he there course public attention, and who, we have not here were the counsel for the humane gentleman claimed the predection of the counsel for the humane gentleman claimed the predection of the counsel for the humane gentleman claimed the predection of interpretation of the Court—for a case so fraught with inhumanity interpretation of the Court—for a case so fraught with inhumanity interpretation of the Court—for a case so fraught with inhumanity interpretation of the Court—for a case so fraught with inhumanity interpretation of the Court—for a case so fraught with inhumanity and calloumness of feeling, we are proud to say, seldom is found to across his week of the proceedings in our law court attracts of the case hardward to the country of the case hardward that the feelings which we should ever hope to find inherent in the human breast. Fally sensible are we that our expessions may reach hard, but they are not stronger than the feelings which he nature, and they are not stronger than the feelings which we had a surface to the former, and which it reads and peak for themselves, and we only fagree that the rules of practice at the bay require counsel, in following his brief, to raise arguments which may be

to the instructions in his brief, we will here recapitalists the grounds on which the application to the Court was made.

In the first place, said the learned connect (for the ingeneity of those lawyers is marvellous), although the inquest was held by the coroner for the horsugh of Wigan, it did not appear, from any direct evidence, that the jury came from the horsugh; it was true the longitudien stated them to be "good and kewful men of the said from by but the jury rought, as the learned commed contanded, to come from the immediate district. This affixeds the first ground of application to the Court. Let us next see what is the seriond; this with an introductory remark that the jury had levied a deceland of 1305, upon a certain holler (which is the tender point), we find to be, that the learned commed had an adidavit, stating that the de-

not appealthough in such

elient, w statemer reeding is taken CURTEY

the learned counsel observes, in such case, the deedend would not stand. But, says the learned Judge, "He might have been killed by a fragusent of the boiler," whereupon Mr. Cowling (for the tarsed ceitsself's name ought to be handed down to posterity) very helly observes, "Oh! then the deedand ought to have been upon the fragment, because the fragment was the immediate cause of death."—"In the case (continued he) of a person being killed by a cannon-hell, the deedand ought to be upon the hell, and not upon the cannon; " and, further, in replication to a research of Mr. Justice Pavvrsons, as to the supposition that death had enused from ecalding, then, that according to the learned counsel's dicta, the decided ought to be upon the water, or the sleam—" Yes," was the cool rejounder, while he adds "if the jury could even have imposed a deedand upon the boiler, it ought then to have appeared that the boiler was a chattel."

Such is the diagraceful course jurreced in our courts of law, "

scalding, then, that according to the isarmod counsar's drue, the dead and sought to be upon the water, or the sigma—"Yes," was the cool rejonator, while he adds "if the jury could even have imposed a deadand upon the boiler, it ought then to have appeared that the boiler was a chattel."

Such is the diagraceful course pierused in our courts of law, it is time when a general feeling pervades the country that Legislative imassures are indisponable for the safety of the working collier and measures are indisponable for the safety of the working collier and measures are indisponable for the safety of the working collier and measures are indisponable for the safety of the very collier and in hand. We are told, on the authority of Mr. Cowline, that in case of a person meeting wish his death by a cannon-ball, the decidand should be on the ball, and not on the cannon—while he emitted to state a case more in point, the suplement of a shell from a mortar, a fragment only of which might be the cause of death, and the identification of which was quite out of the question, and thus the absence of any decodand. But, to return to the case of the cannon-ball, we can well imagins Mr. Cowline's ingenity, if engaged on the other side, showing that the cannon-ball was not the cause of death, and hence that no decodand should be imposed. The cannon-ball, he would properly contend, is barmless in itself, and is only dangerous when used as a projectile when in the hands of others, and thus becomes at once an active and a passive givent—active in carrying out the others when the superior of the power employed to give if force—passive in itself, as without the application of such power it force—passive in itself, as without the application of such power it force—passive in itself, as without the application of such power it force—passive in itself, as without the application of such power it force—passive in itself, as without the application of such power in the such as the

week, this is a and reflection on the form.

From this it will be seen, that the besiers were represented to be in an inefficient state, and there was but one 2-inch wafety-valve to the two, fixed on the pipe uniting them "... while the engineer, who received the filterni wages of 2s. per day, was safly incompetent, the one whose duties he rescoveded in filling having been dismined a few days previous, who received 10s. a week. Such is, is was justly observed in our columns on the occasion, "a sad reflection on the firm."

Before dismissing the subject, we cannot but direct attention to the circumstance that two coroners' inquests were held, the one before Mr. Rounnson on the Weekeeday, when a decidand of 1305, was lavied, and the other before Mr. Generals we on the following day, when the lary fixed a decidand of 606. We have said enough to excite attention, and we trust that funds will be forthcoming to combat Mr. B. Uninnal, in his appeal to the law courts, and that

excite attention, and we trust that funds will be furthcoming to mhat Mr. B. C. N. N. A. in his appeal to the law courts, and that will yet find there is conficient moral feeling and high sense of manning existing, which shall scare him from the courts of law, of make him withdraw from the society of those who possess the sings, as well as appelliation, of man. mlings, as well as appellation, of man.

Since writing the foregoing, which we trusted would be the only instance to which there would be occasion to direct attention, we find mother application each on the part of the bossess philasthrophies. Mr. Burkhald, in set axide the weedlet of two independent juries as inquaries held on the bodies of two other undertunate creatures, whose lives have been sacrificed through the culpable neglect or expedity of the proprietor or his agents. We have already and so much on the conduct of this came—if we are not be even in graing him such appellation—that we sturt needs be brief; yet we should only half perform our dety did we access him by our silence from the indignation of our renders.

saly half prefacts our designed we because that in the fire indignation of our renders. From the statement of the learned common, it appears that, in the From the statement of the learned common, it appears that, in the passent instance, two men were according the short at the collicry indenging to Mr. Barnesand, when " undertomately the rope, being add and derojed, gave way when the backet was about midway, and it men, being precipitated to the horizon wis grout visioner, numbered various superiors, which texteriorated in the deaths of both. "The corross's justice income into the horizon facts, and a decoined in each two of 10.5 was impossed." Let us see what were the grounds of application to the Court-what the arguments advanced? Mr. the of 25.6 was impossed." Let us see what were the grounded of applications to the Court—what the exposurement adjument of Me applications to the Court—what the exposurement adjument of Me are not to the Court—what the exposurement adjument of Me are not to the court of the co

so that, in this instance, we find that too much is embraced in the verdict (in the other case cited, not sufficient), as the engine was, in the opinion of counsel, a harmless agent; while it was further urged, that, under any circumstances, Mr. Blunnell could only be liable to one of those sums levied, as there ought not to be two fines where there was only one accident, no matter how great the loss of life arising therefrom. The same thing could not, said the able and unwearying counsel, be taken twice (except fees), and, therefore, that which was found to be the full value (?) of the thing, as in the present case, ought not to be levied twice; there being, then, but one secident, though two deaths ensued, the whole value should not, he contended, he taken as deedand on both inquisitions.

Such was the argument put forward, and it would, indeed, he an insult to our readers, did we make further comment. The humane Mr. Blundell thinks that 191 loss is enough on the loss of each life, and, by a parity of reasoning, we presume, had five lives been escend instance will aid the object in view—while we envy not the feelings of the humane proprietor, or his paid agent. We presume, however, the latter is paid more than wages of 10s. a week, which Mr. Blundell.'s engineers enjoy, or he would not have worked so hard in his vocation.

Mr. BLUNDELL's engineers enjoy, or he would not have worked as hard in his vocation.

The loss of life upon a large scale appears not to be confined to unines or collieries. Within the past formight, between thirty and forty individuals have been sacrificed to want of caution, as would appear from the evidence adduced at the several inquests held on appear from the evidence adduced at the several inquests held on the bodies. The intelligent jury in one case, at Derby, where six lives were lost by the falling of an arch, from the removal of the centering too room, came to the decision—that in future, in their owing lodgment, there should be two keystones, and that a decdand of (what think our readers?) one shilling should be levied on the keystone, which ought, in their opinion, to have supported the arch. What their object could have been in delivering such a verdict, we leave them to explain—for to us it is inexplicable; if blame lives at the door of the contractor or mason, then let them bring in a verdict of manslaughter—if otherwise, why visit the harmless keystone with a decdand of one shilling—which, houver, we suppose, when paid, will be handed over to the humane guardians of the aljacent Union, whereby some rehef may be afforded to the widow and orphan. In the case at Oldham, where twenty-one lives were lost, it was given in evidence, that the girder, or beam employed in that portion of the building where the accident occurred, was of castino, being an admixture of Scotch (hot-blast, we presume) with some other quality. Now, we believe, it is an admitted fact, that hot blast iron—if we except that made from anthracite—is rotten, and should never be applied where strength is required; it is soft, and easily worked, giving clean castings, but for strength, whather as regards buildings or machinery, would not be admitted by any as engineer or architect. We trust this melancholy socident will have engineer or architect. We trust this melancholy socident will have engineer or architect. We trust this melanch

THE COPPER TRADE-SMELTING.

THE COPPER TRADE—SMELTING.

In the Mining Journal of the 2d inst. we inserted some remarks, from the Stoname Journal, tending to show the growing importance of our respect trade, perticularly with India a said, sithough these observations will equality apply at the present time, we cannot but outling on our amothers and shipmeners engaged in the copper trade to be on the shart, as a persenting works, and thus open a market for the ores of Cuba and Stouth sweling molecular in being made by parties in the United States to notabilish; westing emdeavour is being made by parties in the United States to notabilish; and the control of amothing to month marget than Engined; even should American (in American venado) so much marget than Engined; even should the cost of smelting in North American double that in this country, the three costs in freight would leave an increased profit to mine propositions of Discon, Eng., Vice. Commit. to F. Hants. Eng., in which he observes—"Are you evers that there are several American companion in the Indian of Cuba, who ship the open of their capper mines to England, under the Committee of duty, freight, dec., for want of purchances in the United States? Such is the fact. Now, if these cores could be smelted to the States, even at double the row which it costs as Summars (which is 12. 10s., per ton, and is called return charge), hundreds and thousands of four, and only from Cuba, but from States it costs as Summars (which is now do and states and should be some from the United States in American versue), and thus open almost a new channel of double the passite which have an image how or shipping that profit of fought they should have, and might have had year ago, with those various of the species which have as image how or shipping that profit of fought they should have, and might have had year ago, with those various orders where the ships have an importance of the should seem of fought, or the summar of the passite of the same of the summarical of the summarical of the summarical orde

RAILWAY LEGISLATION.

RAILWAY LEGIBLATION.

We have before us a passphint, under the silven title, addressed in the Enri of Dullsongin, President of the Blased of Truth, by C. J. Gain, Enq.-barrister-ot-law, of the Joseph, which above the writer in in either barryly interested in one present redways, and foods! of competition, or that his optimise and ideas are sailly lashied the age in which we true; the whole gist of his organization is in the undersoon to proper that the Legislation ought not to interfere with the rights granted to establing lines, by giving the section is any of this and the suppose that the Legislation ought.

BOLANOS MINING COMPANY.

books of the company in the Mining Journal of the 19th ult., has been blooks of the company in the Mining Journal of the 19th ult., has been considered to give a comowhat unfair representation of the progress of the adventure—incomech as the month of Jonanny is included, in which month in consequence of the previous "strike" of the miners, there was as as test earlier by the miners, there was as test to the exceptable to some of your renders to see the result of this observance, from Eubreary to August (lately received);—The unions of San Nincomec, San Derende, soft Malanoche, from so close of San Nincomec, and pany possesses the mining rights of the wheels, but of necessity lenger apparate account of each as the owners are different; thus, mixing ground now very productive, is disputed between the owners of San Nincomec son Malanoche—a dispute not at all affecting the company's rights, but only as to which set the owners share (5-12ths) in to be paid.
